Amendments to Claims

This claim listing replaces all prior versions of the claims

- 1. (Currently Amended) An article comprising a thermoplastic polymer composition, wherein said thermoplastic polymer composition has a through plane thermal conductivity of 1.0 watt/m°K or moreand, is a liquid crystalline polymer, and comprises components selected from the group consisting of fillers, reinforcing agents, plasticizers, flame retardants, antioxidants, antiozonants, and lubricants, in amounts conventionally used for such a polymer composition, and. wherein the article is an ovenware itemcontainer that holds food while the food is cooking.
- 2. (Previously Presented) The article as recited in claim 1, wherein said thermal conductivity is about 2 watt/m°K or more.
- 3. (Previously Presented) The article as recited in claim 1, wherein a thermoplastic in said thermoplastic polymer composition has one or both of a melting point and glass transition temperature of about 250°C or more.
- 4. (Canceled)
- 5. (Previously Presented) The article as recited in claim 1, wherein said thermoplastic polymer composition comprises a filler having a thermal conductivity of about 50 watt/m°K or more.
- 6. (Currently Amended) The article as recited in claim 4 1, wherein said thermoplastic polymer composition comprises a filler having a thermal conductivity of about 50 watt/m°K or more.
- 7. (Previously Presented) The article as recited in claim 5, wherein said filler comprises graphite.
- 8. (Previously Presented) The article as recited in claim 6, wherein said filler comprises graphite.
- 9. (Previously Presented) The article as recited in claim 2, wherein said thermoplastic polymer composition has one or both of a melting point and glass transition

temperature of about 250°C or more, and said thermoplastic composition also comprises a filler having a thermal conductivity of about 50 watt/m°K or more.

10. (Previously Presented) The article as recited in claim 9, wherein said filler comprises graphite.

11-22. (canceled)
